

# Work Profile

## Fabricated HDPE Mixing Tanks

### HDPE Mixing Tank Benefits

- + Fusion fabricated tanks can be manufactured with a range of conical or sloped bases for ease of draining.
- + Fusion's internal baffle design provides optimal chemical blending and powder dissolving processes.
- + Fusion's sloping / conical internal tank design requires no external supporting steel frame.
- + Fabricated from HDPE for corrosion and UV resistance or PP for corrosion resistance and higher temperature applications.
- + Fusion tanks offer a 25 year design life and are built to DVS 2205 standards.

**A** Custom fabricated HDPE tank with roof mounted agitator designed to clients specifications and complete with internal conical base.

**B** HDPE Fabricated Mixing tank and bund with integrated instrumentation panel for automated mixing.

**C** Large HDPE mixing vessel complete with mounted / supported agitator.
