

Case Study

Retrofitted Safety Cabinetry

More information about this project can be seen on our website at: fusionaus.com/portfolio/retrofitted-safety-cabinet

A This existing panel required screening but with the option to isolate the pumps separately and still be able to safely maintain the system.

B Fusion designed a cabinet to house the panel and sectioned each system via an internal partition, from the panel we housed the pipe-work using Unex non-perforated cable tray and cover to offer spray protection.

Benefits

- + Corrosion Resistant.
- + Chemical Resistant.
- + Light weight.
- + Maintains pipework visibility.
- + Provides added safety by reducing the pipe-to-person exposure time.
